

this keyword ✓

→ refers to the object that is executing the current function.

```
const user = {
  name: 'Satyam',
  greet: function () {
    log ( this.name ) → "Satyam"
  }
}
```

↘ user object

↘ user.greet() → "Satyam"

→ this depends on how the function is called not where it is written.

this in Global Space

→ window → this refers to window object

→ window → this refers to -
this === window - true

± this inside an object method -
✓

± this in Arrow function - ✓

→ Arrow function do not have their own this

→ they inherit this from their parent / lexical / surrounding scope.

```
const user = {  
  name : "Satyam",  
  greet : () => {  
    console.log(this.name)  
  }  
}  
user.greet() //undefined
```
