

Performance Optimization & Modules

Performance optimization →

code → faster, smoother, and
more efficient.

① ~~avoid~~ unnecessary loops

② use efficient DOM update -

③ div = document.getElementById("div").appendChild

div.style. _____
div.style doc _____ (div).style →
_____ , _____
do _____

④ Debouncing →

⑩ Throttling →

⑪ Lazy Loading

JS modules →

Suppose math.js

```
export function add(a, b) {  
    return a + b;  
}
```

```
export default function sub(a, b) {  
    return a - b  
}
```

app.js

```
import { add, sub } from ". / math.js"
```

✓ add(10, 20)

import substr from './utils.js'
substr(10, 2)

HTML

script → type = "module"

<script type = "module" src = ...></script>

The End

Project
