

6 → 25 lectures

JS Syllabus

✓ PHASE 1: Foundations & Core Syntax ✓

- ✓ Lecture 1: Intro, Client and Server, Setup & V8 Engine ✓
- ✓ Lecture 2: Variables & Memory (let, const, var) ✓
- ✓ Lecture 3: Operators & Conditionals (Logic) ✓
- ✓ Lecture 4: Loops & Control Flow (Automation) ✓
- ✓ Lecture 5: Functions, Scope & Hoisting ✓
- ✓ Lecture 6: Scope Chain & Lexical Scope ✓

✓ PHASE 2: Data Structures & Core Manipulations ✓

- ✓ Lecture 7: Arrays in Depth ✓
- ✓ Lecture 8: Advanced Array Methods (Higher-Order Functions) ✓
- ✓ Lecture 9: Objects, JSON & Spread/Rest ✓
- ✓ Lecture 10: Strings, Numbers & Math ✓
- ✓ Lecture 11: Date, Time & Timers ✓

✓ PHASE 3: Execution Context, this & Advanced Functions ✓

- ✓ Lecture 12: Execution Context & The Call Stack ✓
- ✓ Lecture 13: The this Keyword Deep Dive →
- ✓ Lecture 14: call(), apply(), and bind() Mastery ✓
- ✓ Lecture 15: Closures & Function Currying ✓

✓ PHASE 4: DOM Manipulation & Browser Architecture ✓

- ✓ Lecture 16: DOM Selection & Manipulation ✓
- ✓ Lecture 17: Event Handling & The Event Object ✓
- ✓ Lecture 18: Event Bubbling, Capturing & Delegation ✓
- ✓ Lecture 19: LocalStorage, sessionStorage & Todo App ✓

✓ PHASE 5: Asynchronous JavaScript & APIs ✓

- ✓ Lecture 20: Synchronous JS, Event Loop & Callbacks ✓
- ✓ Lecture 21: Promises & Fetch API ✓ — imp —
- ✓ Lecture 22: Async/Await & Error Handling ✓

✓ PHASE 6: Object-Oriented JS, Performance & Modern Concepts ✓

- ✓ Lecture 23: Prototypes & Prototypal Inheritance ✓
- ✓ Lecture 24: ES6 Classes & OOP ✓
- ✓ Lecture 25: Performance Optimization & Modules ✓

55

Lecture 01 - Intro, Client and Server, Setup &

English high

Lecture 01 - Intro, Client and Server, Setup & V8 Engine

(JS)

JS intro or, what is JavaScript

→ JS is a high level programming language that is used for converting static web pages to interactive and dynamic web pages

≡ Interactive → websites responds to the user

≡ Dynamic → Hi, Guest
after login
Hi, Satyam

Note . JS allows websites to respond to users and change their content while they are running.

Frontend and Backend →

JS in Frontend -

- JS runs inside the browser with the help of JS engine ↓

Ex → JS engine is a program present in web browsers that execute JS code

Chrome → V8
Firefox → SpiderMonkey
Safari → JS core
Edge → Chakra

JS in Backend →

- JS can also run on the server using

- Not a programming language or framework
- it's a runtime environment of JS
- node JS allowed JS to run outside the browser

client and server

Setup →

V8 engine -

→ It is the engine inside chrome that executes JS code.

- Browser → when we open a webpage the browser finds JS code and gives it to the JS engine to execute

V8

Simple → JS code → Browser → V8 Engine
code execute. ↩
